

Day 3 Health Team Group Work: Where do we go from here?

For this session, please break into health element groups.

Group task: Please reflect on what you have learned over the past 3 days, and consider how you can apply this learning in your programmatic work. One representative from your group has already been identified to present in a **panel** discussion this afternoon. Over the next hour, **please help him or her prepare some remarks that respond to the questions below.** S/he should plan to report out for about 5-10 minutes.

1. What is the overarching goal of your program/project? (Remind the audience.)

2. As a group, identify **1-2 significant health system challenges** that your project or team faces in trying to achieve this program goal.

3. Consider the following questions:
 - a. How might the rollout of JKN affect the challenges you have selected? Consider both potential positive and potential negative effects.

 - b. How could USAID and its implementing partners **support improvements to JKN, or leverage the potential of JKN,** to address these challenges?

 - c. Identify one way in which your program will apply what you have learned during this training going forward.
