

Assessment Of RMNCH Functionality In Health Facilities in Osun State, Nigeria

The Health Finance and Governance Project

August 2018

This work was funded with support from the U.S. Agency for International Development (USAID) as part of the Health Finance and Governance (HFG) project led by Abt Associates under USAID cooperative agreement AID-OAA-A-12-00080. The contents are the responsibility of Abt Associates and do not necessarily reflect the views of USAID or the United States Government.

Abt Associates Inc.

USAID's HFG Project in Nigeria- Goal and Approach

HFG supports state actors to put in place necessary policy, legal and institutional frameworks at the state level to ensure that states spend more on health and spend efficiently

- HFG's approach is to gather and effectively use evidence for:
 - Increasing domestic resource mobilization capacity for health
 - Strengthening the governance of key health financing related institutions/processes
 - Supporting the implementation of health care financing reforms

| Executive Summary | Overview of study, purpose and main findings | Slide 6 |
|----------------------------|--|----------|
| Background and Rationale | Why do a Service Availability and Readiness Assessment (SARA) in Osun State? | Slide 15 |
| Methodology | How were facilities identified and selected? | Slide 20 |
| Results and Findings | Results of assessments categorized thus: - Facility Characteristics- Slide 23 - Infrastructure- Slide 26 - Service Availability- Slide- Slide 45 - Admin and Communications- Slide 54 - Facility Financial System- Slide 65 - Human Resources for Health- Slide 81 - Equipment- Slide 90 - Referral – Slide 98 | Slide 24 |
| Limitations and Next Steps | Study limitations and proposed next steps | Slide 99 |

Purpose

- National Health Act (NHAct) was passed in 2014, which provides a Basic Health Care Provision Fund (BHCPF)
- Osun was selected as one of the BHCPF implementation pilot states
- Service availability and readiness assessment (SARA) conducted to determine the current state of service delivery readiness of Primary Healthcare centers (PHC) for provision of services in the (Basic Health Care Package Fund (BHCPF) pilot/start up

▶ Facility Characteristics, Geographical distribution

- Sampled at least one facility per ward- 358 total
- Primary health center is the major facility sampled in the LGAs accounting for 97% of all facilities sampled
- 100% of primary health facilities sampled are government owned
- 57% of primary health facilities located in the rural areas

➤ Health Facility Infrastructure

Overall, there are 49 percent of health facility need significant renovation, and medium proportion (33-69 percent) of health facilities have vital infrastructure such as a water source, on site toilet, and electricity present etc. However, the variation of proportions exists, some LGAs have extremely low proportion of vital infrastructure.

| | All facility weighted average | Maximum | Minimum |
|------------------------------------|-------------------------------|---------|---------|
| Significant Renovation Need | 49% | 92% | 11% |
| Perimeter fending present | 69% | 100% | 40% |
| Electricity present | 51% | 90% | 9% |
| Water source present | 33% | 78% | 8% |
| Availability of on-site toilets | 50% | 80% | 9% |
| Stand-alone maternity ward present | 37% | 80% | 7% |
| Well Maintained Delivery Room | 41% | 90% | 7% |

▶ Availability of RMNCH Services

Overall, high proportion (85-99 percent) of health facilities have provided RMNCH such as antenatal care, prenatal care and childhood routine immunization etc. However, the proportion of emergency obstetric care was low (21 percent) and the great variation of proportions exists, some LGAs have extremely low proportion of providing RMNCH services.

| | All facility weighted average | Maximum | Minimum |
|---------------------------------|-------------------------------|---------|---------|
| Antenatal Care | 95% | 100% | 70% |
| Prenatal Care | 90% | 100% | 44% |
| Emergency Obstetric Care | 21% | 47% | 9% |
| Routine Immunization | 99% | 100% | 90% |
| Family Planning | 85% | 100% | 47% |
| Basic delivery services | 91% | 100% | 50% |

▶ Human Resources for Primary Health Facilities

The results described below the gross inadequacy of health workers to provide skilled delivery services for a vast majority of the population. With very few facilities having staff armed with relevant training and translating those to practice, there is certainly a technical capacity gap in facilities.

| | All facility weighted average | Maximum | Minimum |
|------------------|-------------------------------|---------|---------|
| | 5 | 17 | 2 |
| Dentist | <1 | 3 | 1 |
| Health Assitants | 16 | 27 | 4 |
| Medical Officers | <1 | 4 | 1 |
| CHEW | 18 | 40 | 6 |
| Lab Technicians | 1 | 9 | 1 |
| Volunteer | 3 | 26 | 1 |

▶ Availability of Equipment in Primary Health Facilities

In general, the storage of required medical commodities and equipment is low in the primary health facilities. As shown in the table below, there was only 25 percent of primary health facilities have at least 50 percent of WHO required equipment and the availability of all 6 WHO defined equipment declined into 3 percent.

| | All facility weighted average | Maximum | Minimum |
|--|-------------------------------|---------|---------|
| At least 50% of WHO required Equipment | 25% | 59% | 0% |
| All 6 WHO-defined basic equipment | 3% | 18% | 0% |
| Waste Disposal Equipment | 93% | 100% | 42% |

▶ Administrative and Communication System

In general, the LGAs in Osun state have poor administrative capacity. The inadequacy of guideline and protocols, quality assurance procedures might affect the quality of services provided. In addition, over 80% of primary health facility experienced the delay of receiving fund from the government.

>> Financial Management System

On average, only 2.5 percent of primary health facilities have accurate NHIS utilization and claims form that correspond and are accurate. And in general very few primary health facilities have financial management capacity in terms of human resources and financial system infrastructure. Although the data was limited, very few LGA was able to get alternative fund for their operational expenditure. It is noted the recorded primary health user fee dramatically varied among different LGAs.

Service Referral

In general, there was only 37 percent of facilities with documented referral and follow up system, Iwo LGA had the highest availability (73 percent) of referral and follow up system, on the contract, the Irewole and Boripe LGA had lowest availability (8 percent) of referral and follow up system.

>> Limitations

- Due to Incomplete data found during analysis period resulting from missing sections in the data collection tablets, the results in this assessment do not include data on HMIS, Utilization and clinical outcomes and Community involvement.
- ❖ A Mop up exercise is planned by the BHCPF Secretariat to collect the missing data.

Background: National Health Act 2014 and the BHCPF

- The National Health Act (NHAct) was passed in 2014, which provides a Basic Health Care Provision Fund (BHCPF) that will derive from 1% CRF of the federation
- The BHCPF aims to support the effective delivery of Primary Healthcare services, provision of a Basic Minimum Package of Health Services (BMPHS) and Emergency Medical Treatment to all Nigerians
- Based on a set of criteria, Osun, Niger, and Abia were selected as Pilot states for the BHCPF.

BHCPF Implementation

GATEWAY OPERATIONS

- The fund shall be operated through 3 complementary programmes described as gateways. These gateways are:
 - The National Primary Health Care Development Agency (NPHCDA) gateway
 - The National Health Insurance Scheme (NHIS) gateway
 - The Emergency Medical Treatment (EMT) gateway

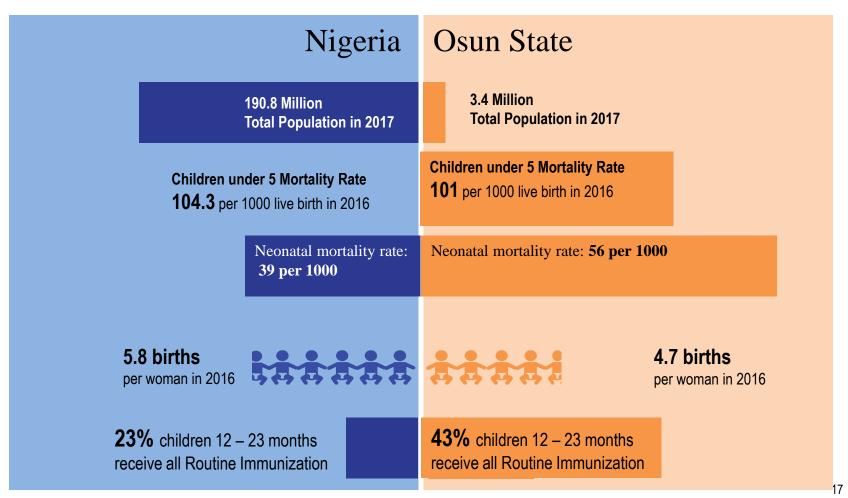

Implementation of the BHCPF

NPHCDA gateway:

- → 45% of the BHCPF is earmarked for the financing of health inputs including infrastructure, human resources and commodity.
- This earmark recognizes the weak status of primary care delivery.

Health Statistics in Osun State

Osun maternal, neonatal, and child health statistics

Significant challenges In Osun State

- Inadequate capacity and gaps exist in required framework and structures for implementing health-financing reforms.
- Service delivery gaps also exists with consequent supply side gaps which could militate against the health financing reform efforts being made in the state.
- Institutional weaknesses in Osun State health system is evidenced by poor performance on PHCUOR score card report of NPHCDA (November 2015) and poor state of facilities infrastructure and in service delivery (facility survey conducted by the World Bank).

HFG support

HFG provided the needed technical and implementation support to the FMOH and Osun state that will enable them to effectively implement the reforms utilizing the BHCPF for universal health coverage

SARA Objective

To determine the current state of service delivery readiness of Primary Healthcare centers (PHC) for provision of services in the (Basic Health Care Package Fund (BHCPF) pilot/start up

SARA Methodology in Osun

- SARA Tool Developed by a SARA committee using parameters from the World Bank's SDI, WHO SARA and an inhouse Quality Scoring assessment tool
- Purposive sampling of facilities to <u>ensure one PHC/ward</u>. Osun state officials chose 358 primary health centers for each ward in the state.
- → 358 facilities were surveyed over a period of 3 weeks from 16th April 2018 to 7th May 2018.
- The facilities assessed comprised of 346 Primary health centers, 7 primary health clinics and 5 Health post

SARA Methodology in Osun

- ▶ Assessment was covered by 16 teams which included:
 - 2 data collectors per team,
 - 8 supervisors to supervise two team each, and
 - ❖ 5 monitors.

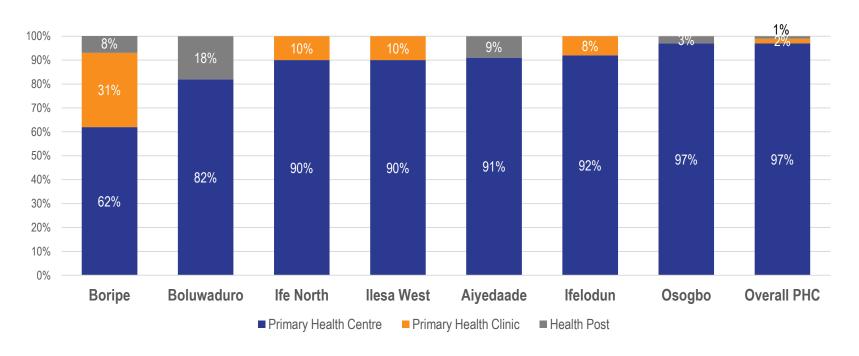

>> An average of 3 facilities were covered per day per team

Facility Types

| Type of facility | Number | Percent |
|-----------------------|--------|---------|
| Primary health center | 346 | 97 |
| Primary health clinic | 7 | 2 |
| Health post | 5 | I |
| Total | 358 | 100 |

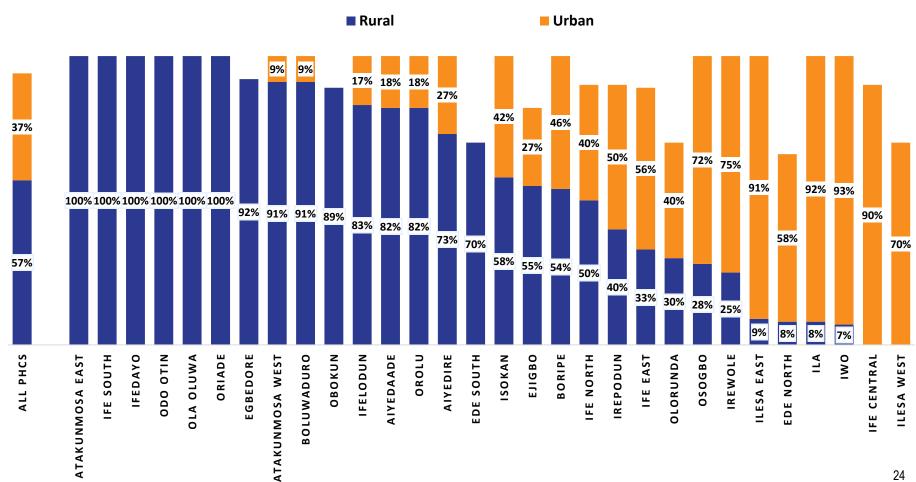

Facility Characteristics

- Distribution of facilities by Type
 - Primary health centre (PHC) is the major primary health facility (100%) in the most LGAs in Osun state. Overall, it accounts for 97% of overall primary health facilities across all the LGAs.
 - Some LGAs have various primary health facilities composition as shown in below.

Geographical distribution

Distribution of facilities by rural/urban and LGA

Geographical distribution

>> 358 facilities from 30 LGAs selected thus:

| | LGA | No. |

Health Facility Infrastructure

Facility infrastructure was assessed from the following aspects:

- Overall need for upgrade/renovations
- Indices such as perimeter fencing, power supply, toilet facilities, water supply, inpatient wards, staff accomodations, and labor/delivery room conditions
- 3. The infrastructure to support waste management in the primary health facilities

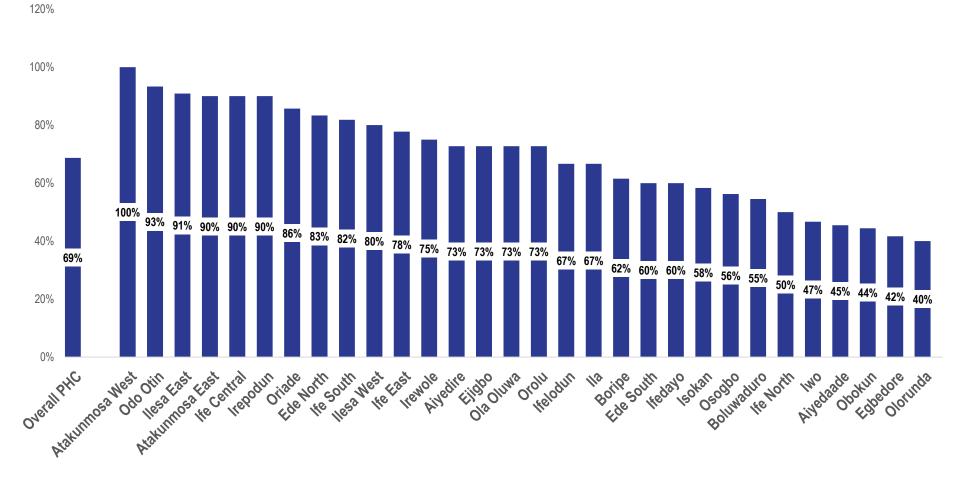

Infrastructure-Renovation Need

Proportion of health facilities requiring various degrees of renovations (%)

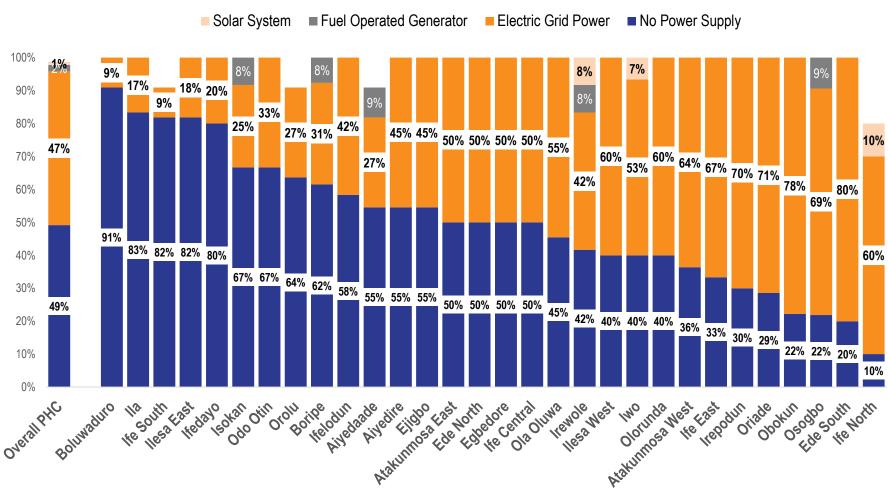

Infrastructure-Perimeter Fencing

Proportion of health facilities with no Perimeter Fencing (%)

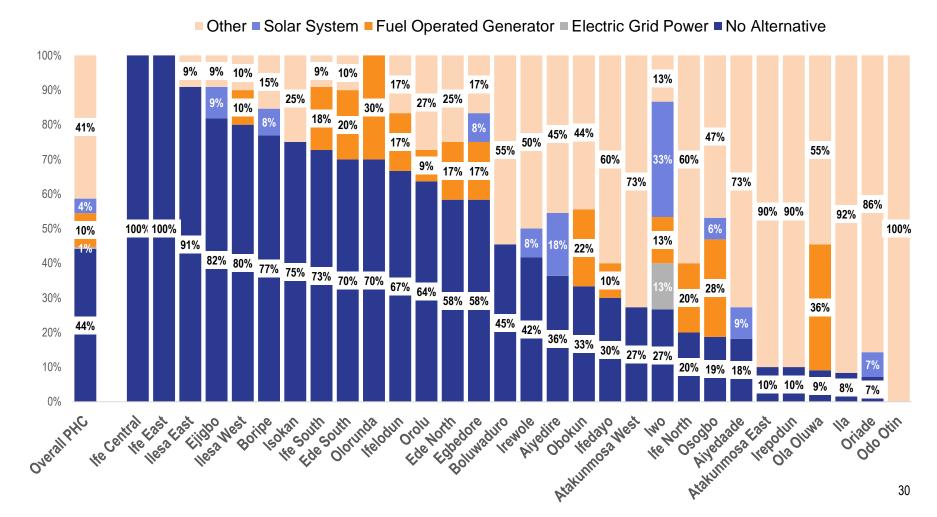

Infrastructure-Electricity

Proportion of Electricity source (%)

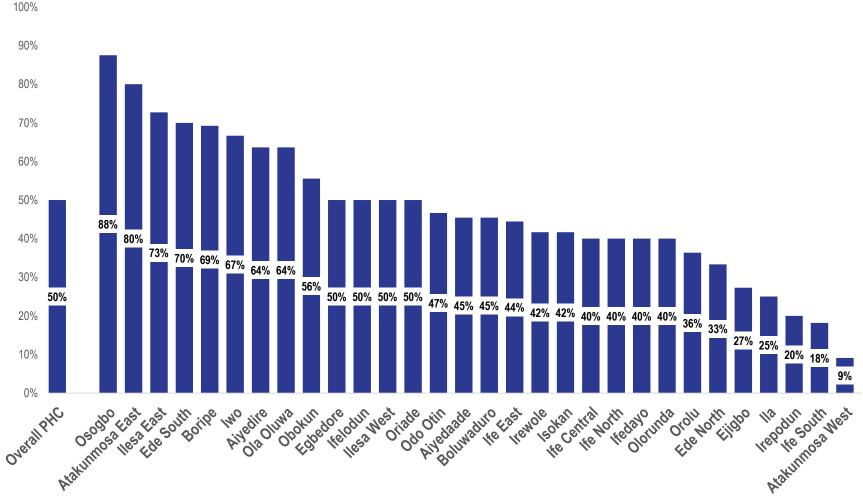

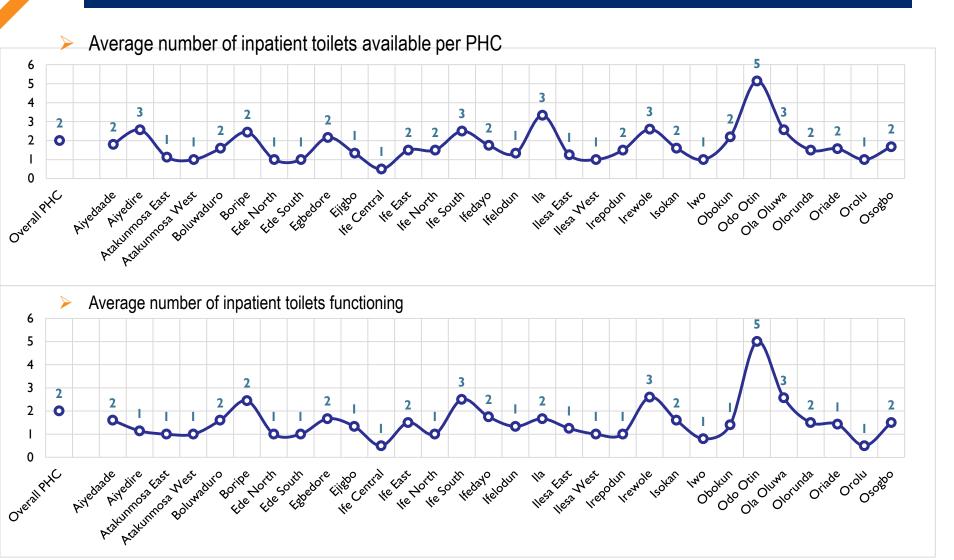

Infrastructure-Electricity

Proportion of health facilities with alternative electricity source (%)

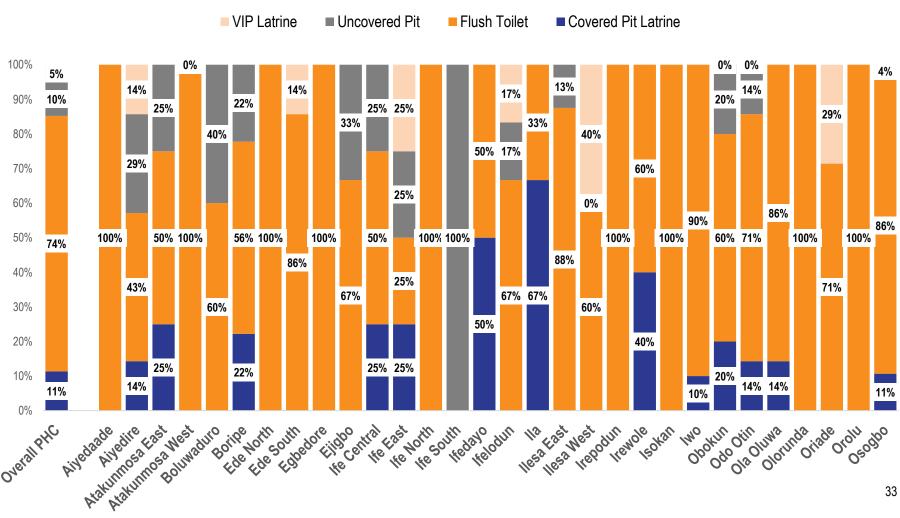

Proportion of health facility with functioning toilet (%)

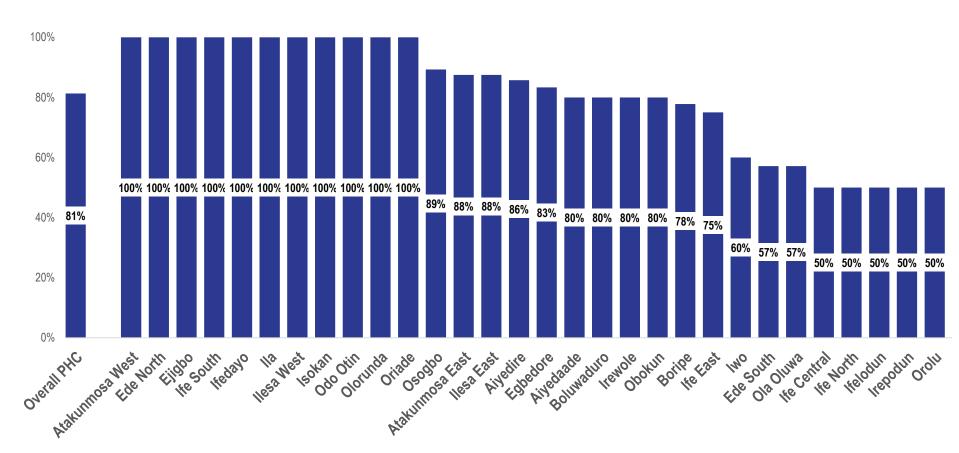

Proportion of health facilities with various Types of Toilet (%)

Infrastructure – Water Supply

Proportion of Main sources of Water Among health facilities (%)

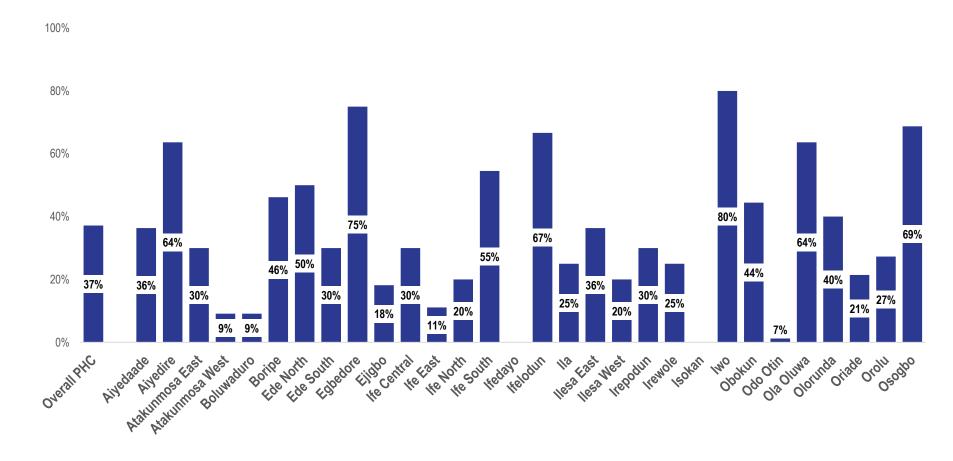

Infrastructure – Inpatient Ward

Proportion of health facilities with inpatient ward (%)

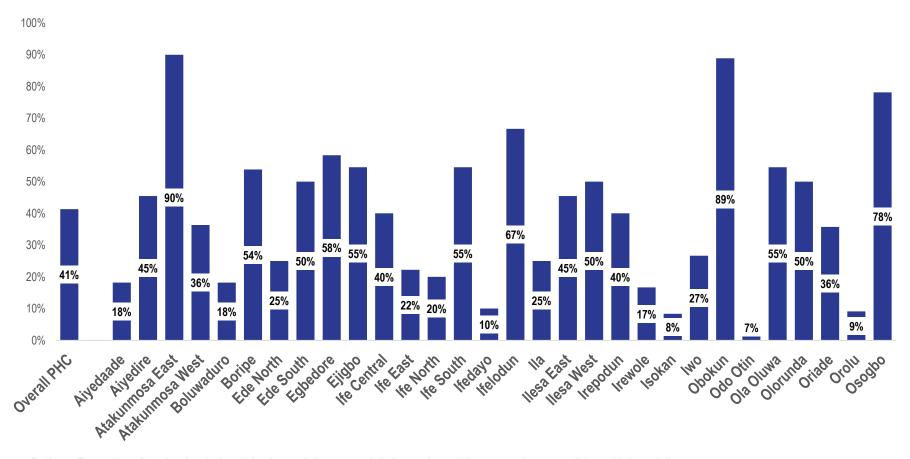

Infrastructure- Maternity Waiting Room

Proportion of health facilities with Maternity Waiting Room (%)

Infrastructure- Maternity Well Maintained Delivery Room

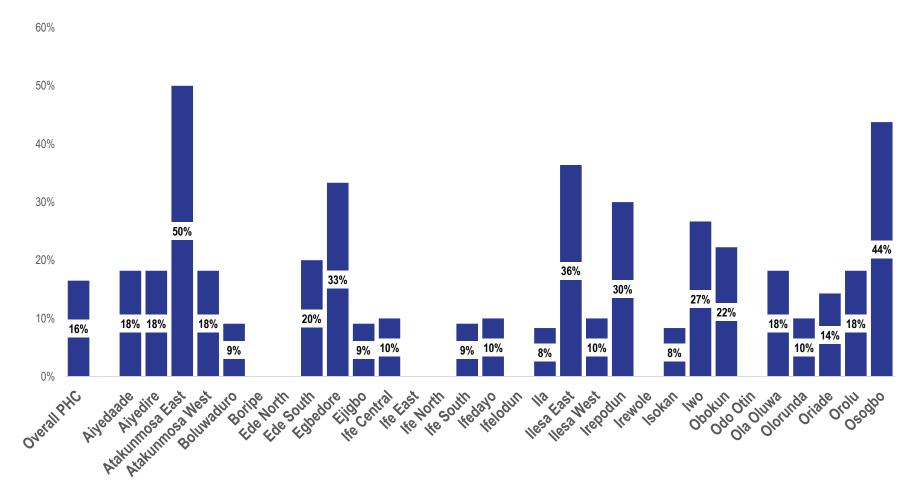

Proportion of health facilities with Maternity Well Maintained Delivery Room(%)

Delivery Room is well maintained when it is clean, delivery couch is in good condition, water is accessible and it is well lit

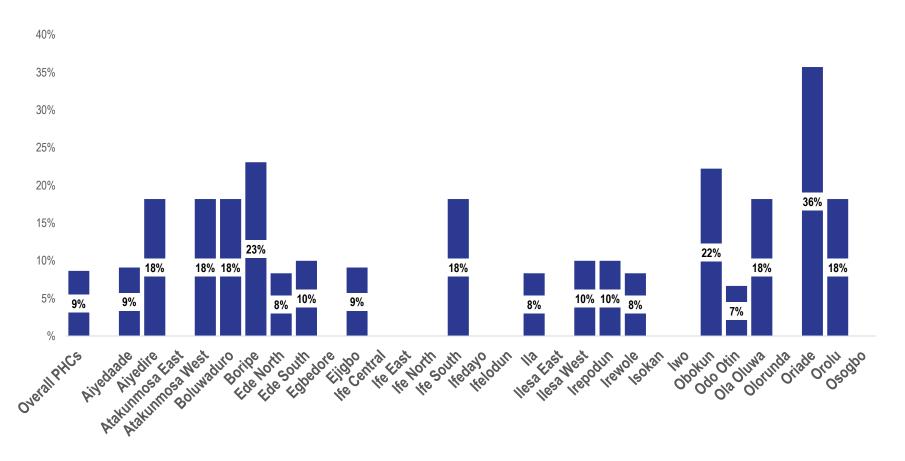

Infrastructure – Call Room

Proportion of health facilities with with Call Room (%)

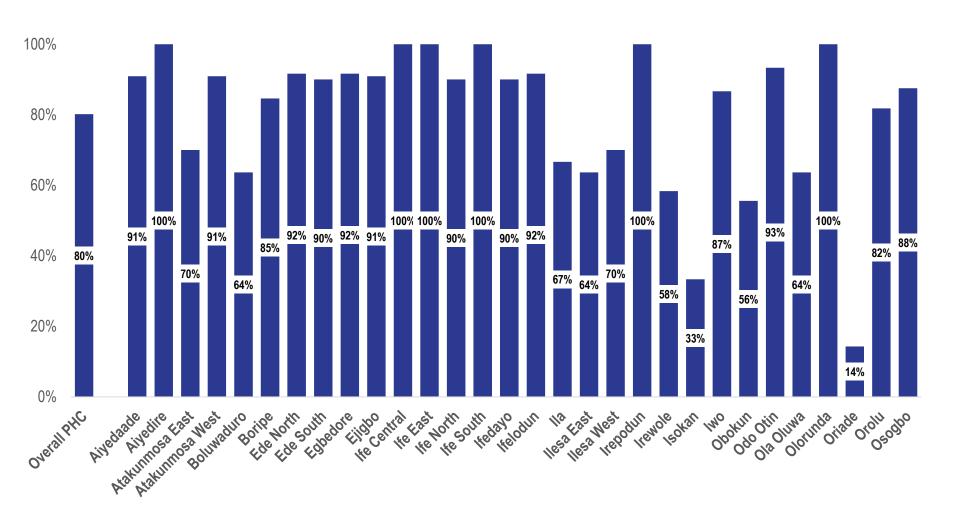

Infrastructure-Staff accommodation

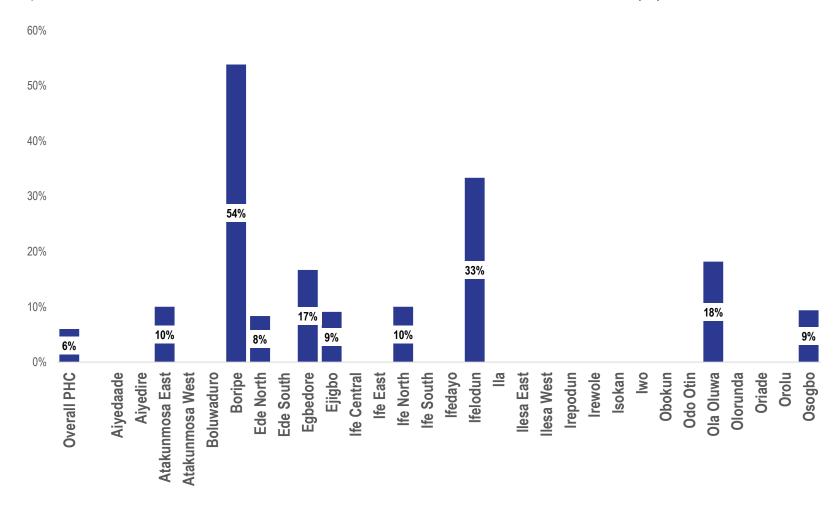

Proportion of health facilities with with staff accommodation(%)

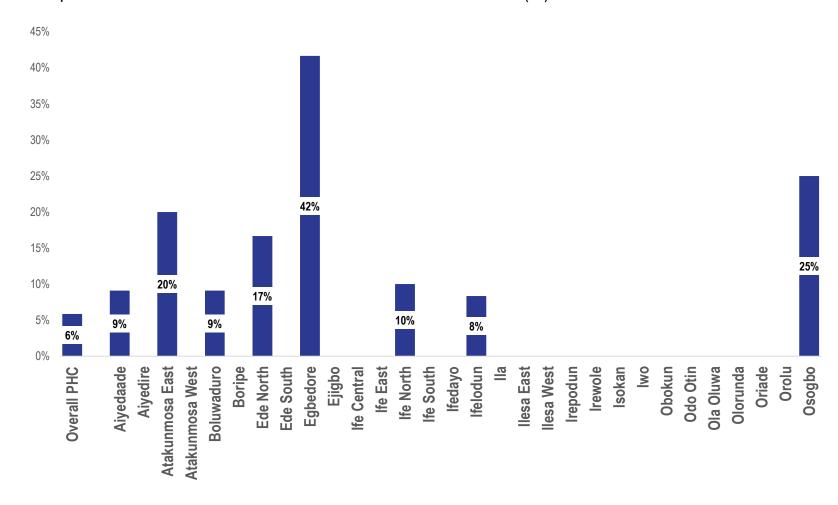

Proportion of health facilities with security box for sharps (%)

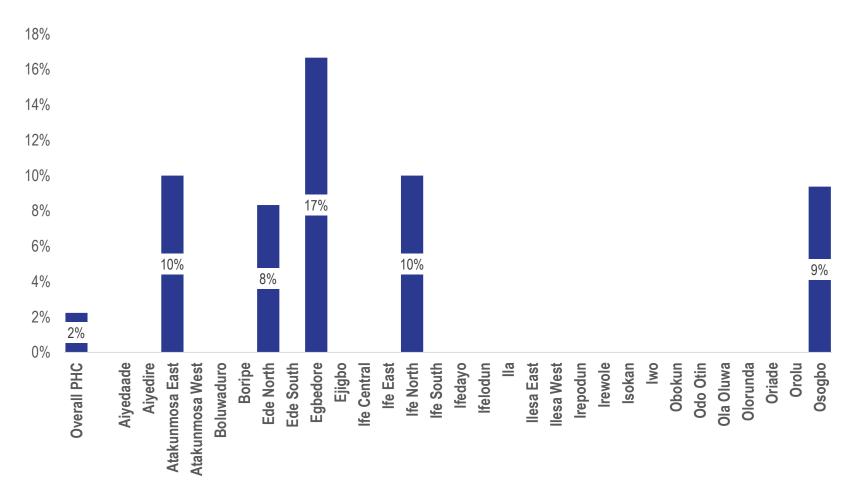

Proportion of health facilities Yellow and Red Bins for contaminated medical waste(%)

Proportion of health facilities Black Bins for contaminated waste(%)

Proportion of health facilities with all three waste disposal means - security box, yellow bin and black bin (%)

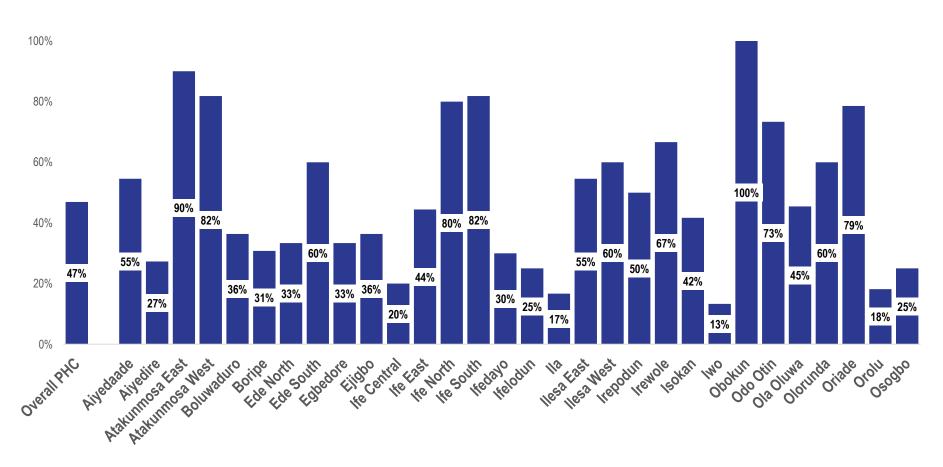

RMNCH Services Availability

- Facilities were assessed on the availability of the following RMNCH services:
 - Antenatal Care
 - 2. Prenatal Care
 - 3. Emergency Obstetric Care
 - 4. Routine Immunization
 - 5. Family Planning
 - 6. Basic delivery services

RMNCH Service Availability- 24 hours

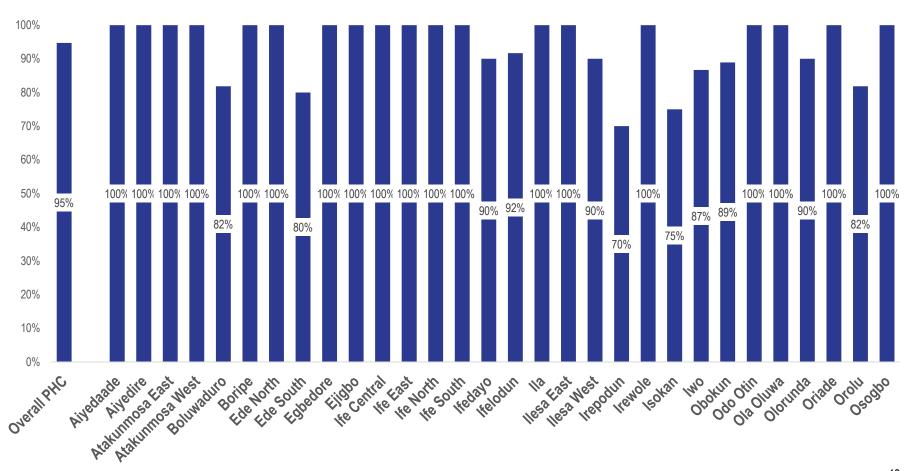

Proportion of health facilities open 24 hours a day (%)

120%

Proportion of health facilities Providing Family planning services(%)

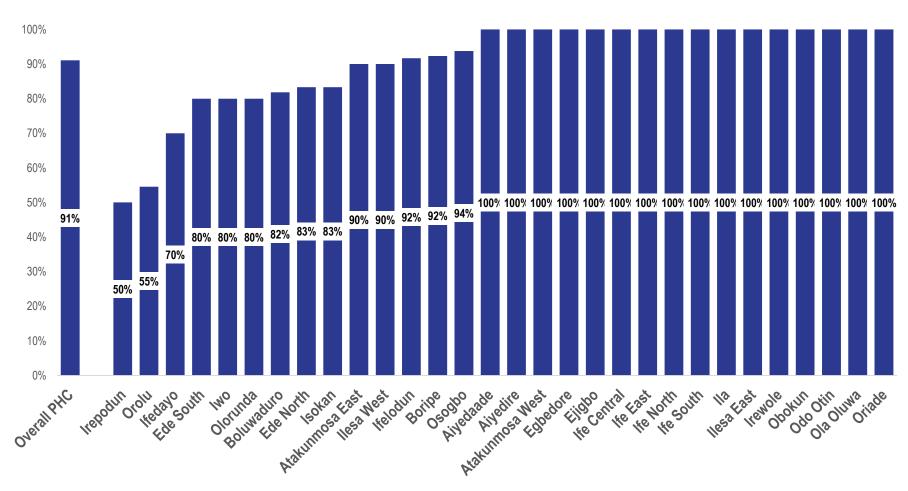

RMNCH Service Availability- RI

Proportion of health facilities Providing Childhood Routine Immunization (RI) services (%)

RMNCH Service Availability- L&D

Proportion of health facilities providing labor and delivery services (%)

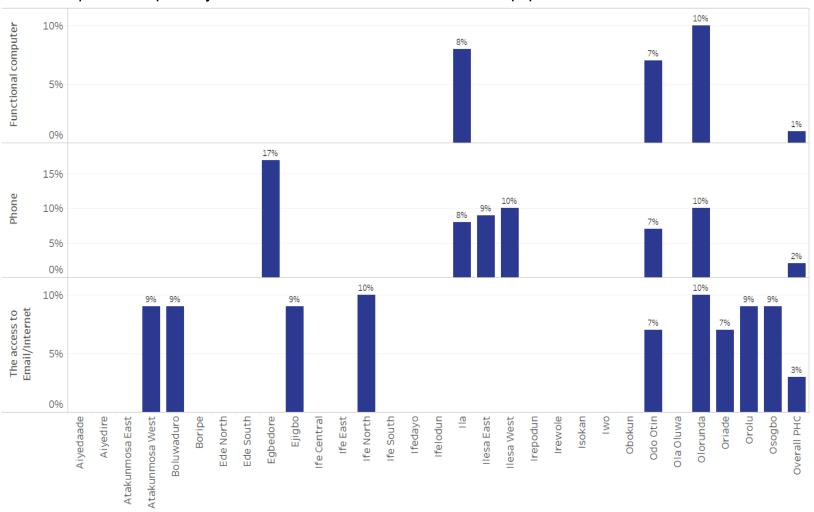

Admin. & Communication

In this section, we assessed the facilities' administrative and communication system from the following aspects:

- 1. The availability of communication equipment
- 2. The availability of guidelines and protocols
- 3. Operational funding management
- Quality assurance management

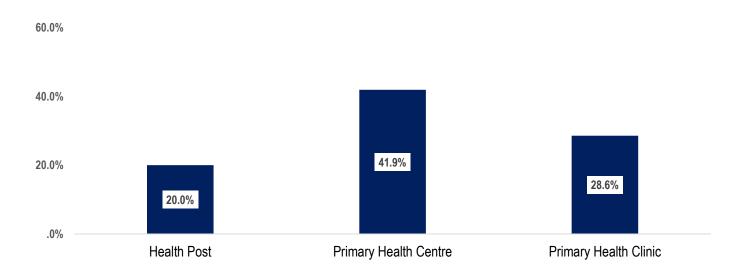

Admin. & Communication - Equipment

Proportion of primary health facilities with communication equipment

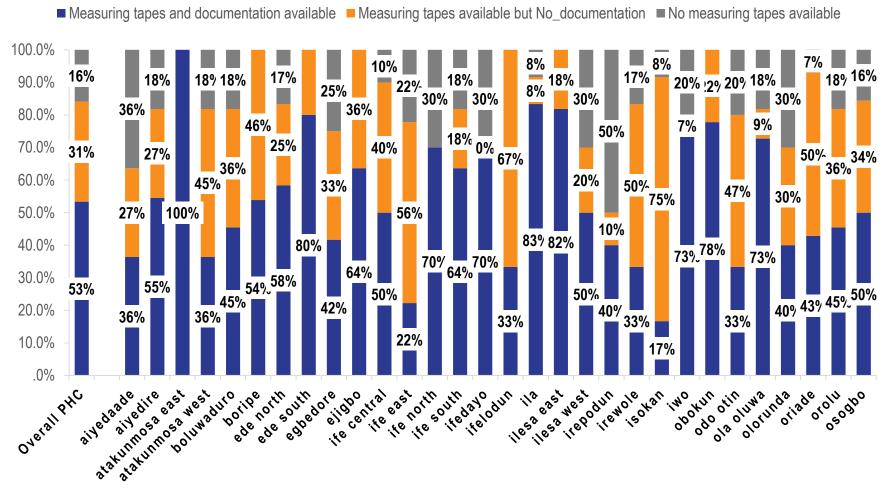

Admin. & Communication - Guidelines & Protocols

Proportion of health facilities with guideline on standard precautions for waste management (%)

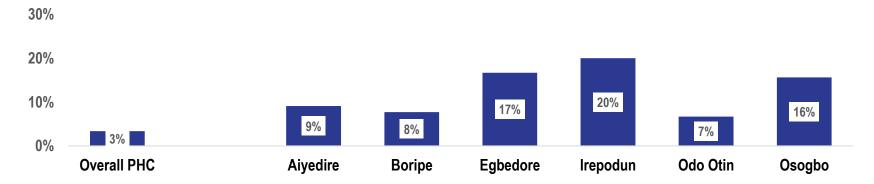

Administrative System - Guidelines & Protocols

Proportion of health facilities with nutritional assessment guide (MUAC)(%)

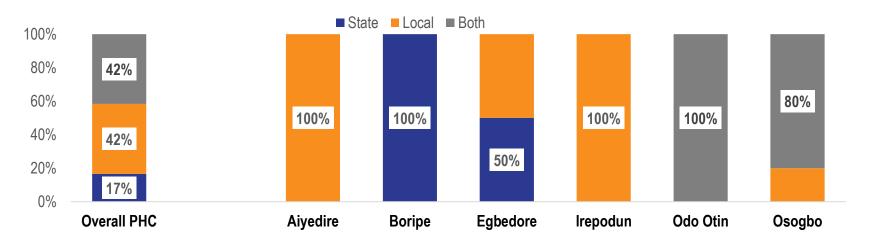

Admin. & Communication - Government and operational expenses

Admin. and Communication— Quality Improvement

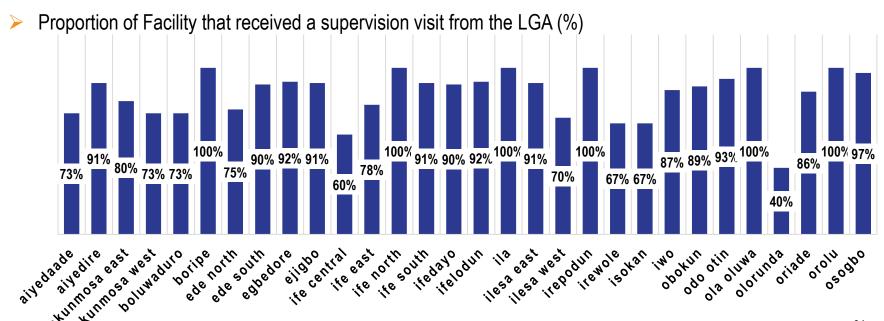

Proportion of Facility with Quality Improvement plan(%)

Admin. and Communication– Quality Improvement

Proportion of Facility with supervisory visit from LGA with a copy or written feedback left(%)

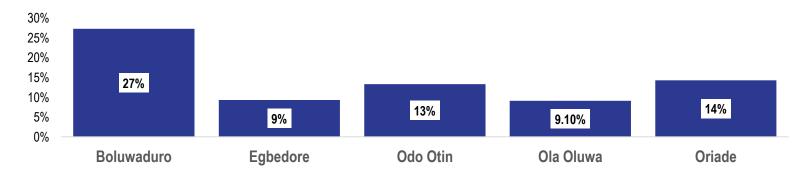

Facility Financial System

In this section, we examined the facility's financial system from the following aspects:

- 1. NHIS utilization and the status of claim forms
- 2. User fees for health consultation, lab test, MNCH services, TB and HIV services
- User fee exemptions for old and poor population, facility staff and their relatives
- Alternative sources to fund operational expenses in the health facilities
- Facility Financial Management

Facility Financial System- NHIS utilization

- Proportion of primary health facility with appropriate NHIS utilization and claim forms (%)
 - Only 1.7% of primary facilities have appropriate NHIS utilization and claim forms.
 - Specifically, 27.3% in Boluwaduro, 13.3% in Odo Otin and 7.1% in Oriade.
- Proportion of Facility with accurate NHIS utilization and claims form that correspond and are accurate (%)
 - On average, only 2.5% of primary health facilities have accurate NHIS utilization and claims form that correspond and are accurate.
 - The following graph shows the specific proportion in the surveyed LGAs.

Facility Financial System – Consultation User Fees

▶ Average User Fees for Consultation (Naira)

| User Fee | Cons. | Cons. | Registrati | Malaria Drug (ACT) | Diarrhea | ARI | |

Human Resources for Health

- In this section, we assessed the following aspects of the human resources for health (HRH) system:
 - Staffing availability in the primary heath facilities
 - For health and non-health workers
 - Quantified by the skill set(s)
 - HRH Characteristics in the primary health facilities gender, absenteeism, etc.
 - HRH Management recruitment procedures and administration, documentation etc.

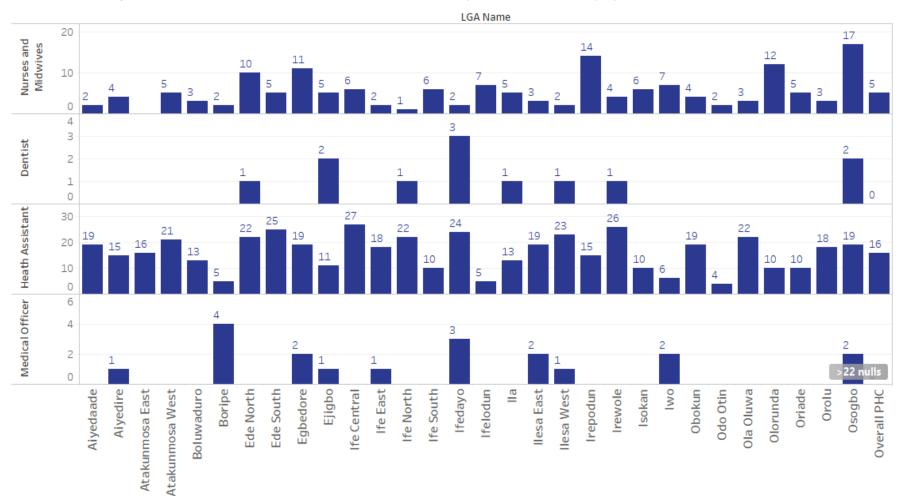

Human Resources for Health-Availability

Average number of general workers and health workers in each primary health facility

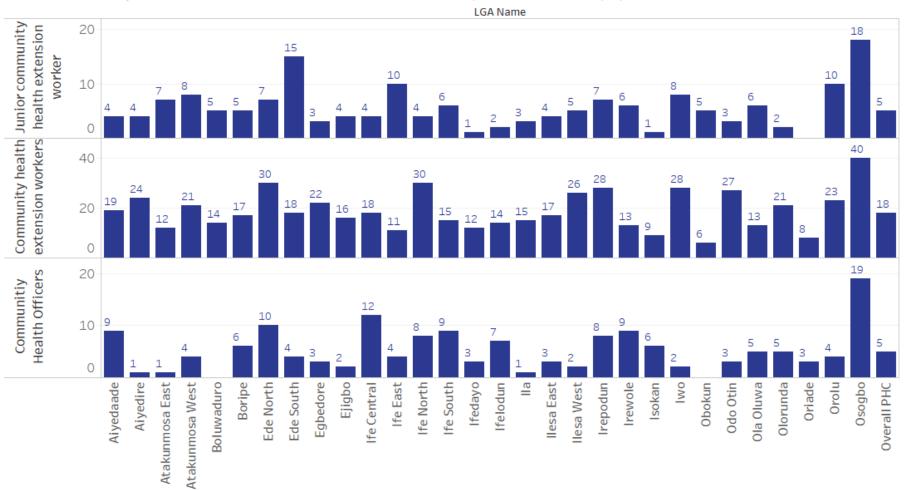

Human Resources for Health- Composition

Equipment- Waste Management

Proportion of facilities using various means to dispose medical wastes (%)

Referral

Proportion of facilities with documented referral and follow up system(%)

Study Limitations

Missing Data

- This report acknowledges missing section of the Osun SARA
- This is as a result of missing sections in the data collection tablets which was uncovered during analysis
- The missing data include:
 - Sections 8 HMIS,
 - Sections 9 Utilization and clinical outcomes
 - Sections 10 Community involvement
- Recommended Next Steps:
 - Collect Missing data- A two weeks mop-up data collection exercise was planned by BHCPF Secretariat to obtain missing data.
 - Presentation, validation of findings to stakeholders
